

Hold It Right There with Custom-Fit Carton Flow Mounting Brackets

Cartons, totes, and cases may be flowing, but your carton flow rack is secure. Pair your carton flow product with custom-fit mounting brackets for an easy-to-install, perfect fit.

The secure fit of your carton flow rails and tracks is critical to the successful long-term use of your system. Poor substitute brackets can create ill-fitted or unsecured flow rails that shift in the rack and negatively affect flow. They can also interfere with accessories such as lane dividers and entry guides, and automation devices –don't take the risk; choose Mallard mounting brackets.

Advantages:

- Custom-fit for each carton flow product
- Easy to install
- Compatible with system accessories
- Accommodates varying pitch levels
- Suitable for beam labels
- Recessed to allow order pick automation, i.e., RFID, pick- & put-to-light

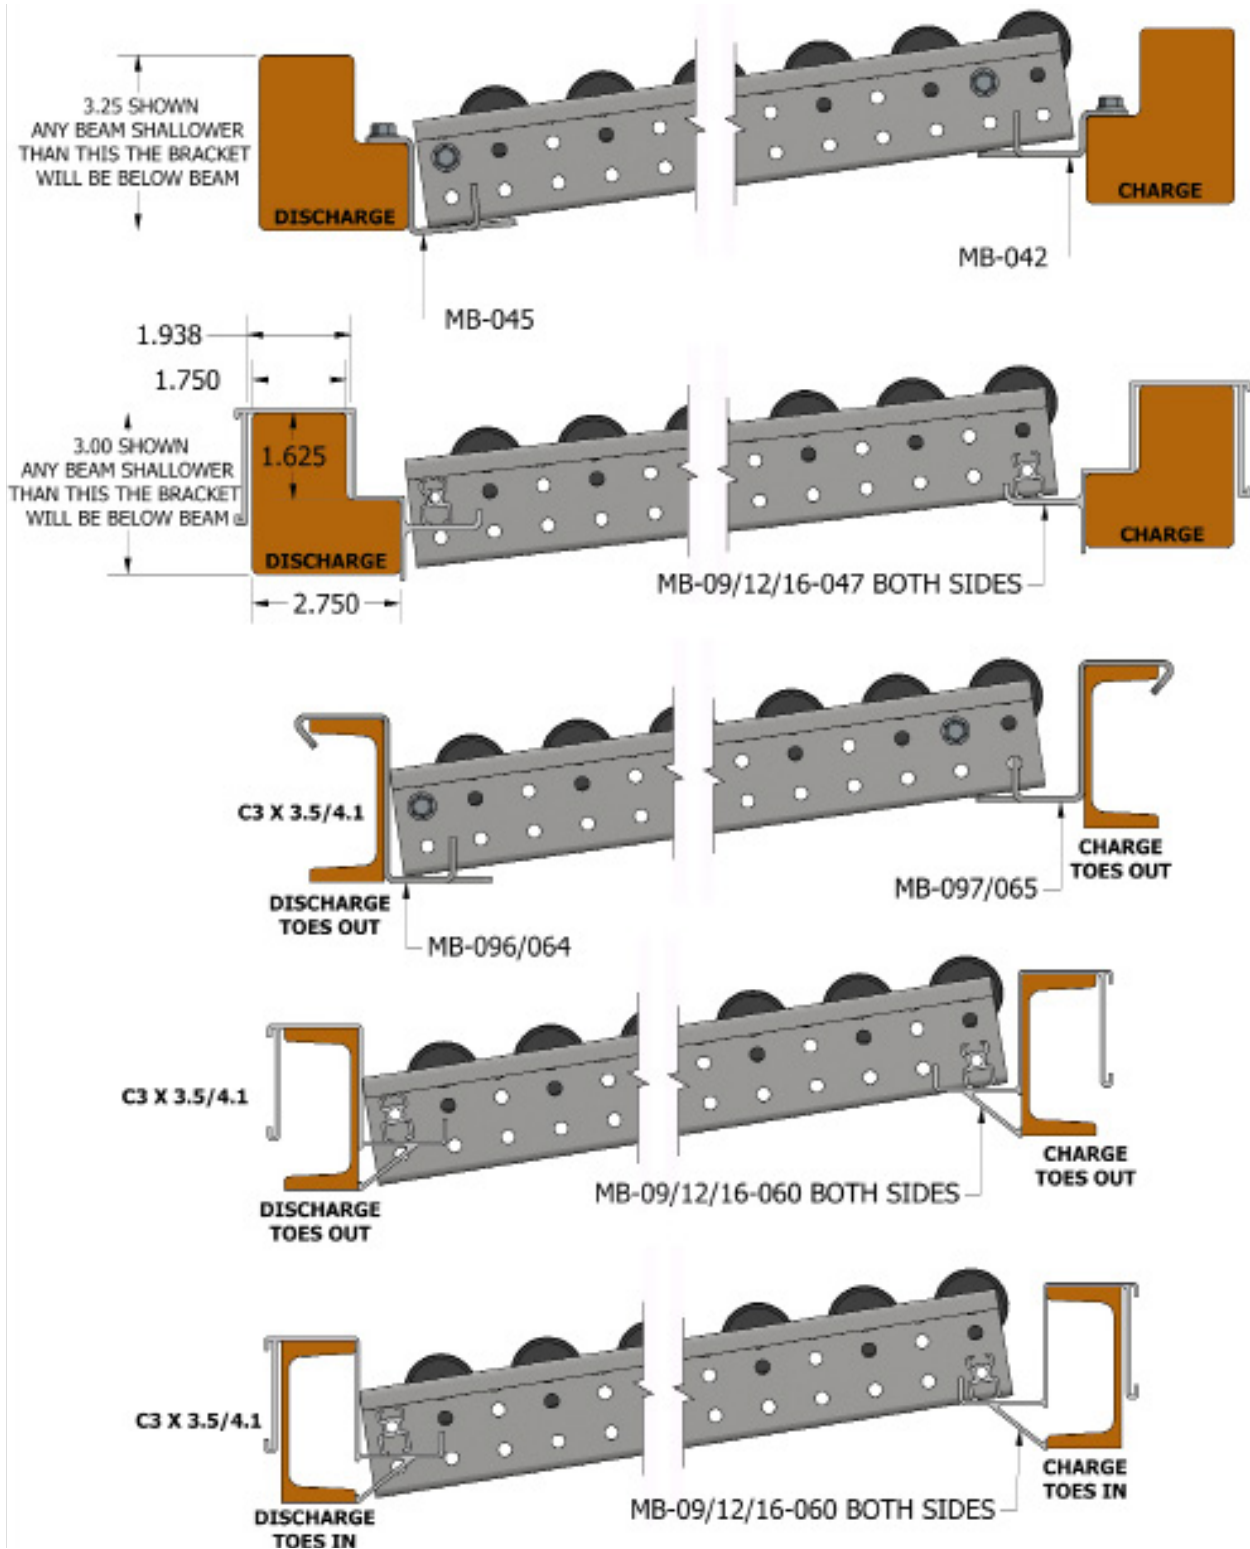

Specifications:

- New rack – refer to the detailed beam drawings for proper installation
- Retrofit rack – closely inspect for any damage that may interfere with safe installation
- Beam specs – ensure beam specs match mounting bracket type. When in doubt, contact Mallard

Call your Mallard representative for guidance in selecting the right mounting brackets for your carton, case, or tote storage. Our gravity flow rack specialists will ensure a great fit for your application.
